The CRAFFT Assessment (adapted by John R. Knight)

The CRAFFT assessment is a tool used to screen for the presence of substance use disorders. It consists of seven questions that are used to identify a patient's risk level for substance use disorder. The questions are as follows:

1. Ever smoked cigarettes?
2. Ever drank alcohol?
3. Ever used pot, weed, hash, etc.?
4. Ever used drugs?
5. Ever used drugs (K2, Spice, etc.)?
6. Ever used drugs (K2, Spice, etc.)?
7. Ever used drugs (K2, Spice, etc.)?

The answers to these questions are binary (yes/no) and are used to calculate the CRAFFT score. A higher score indicates a higher risk for substance use disorder.
